## **The Multi-Grammatical Function of the Common Morphological Formulas: A Study in The Holy Quran, Hafs Recitation**

**Dr. Yahya bin Abdullah bin Hassan al Sharif**

### **Abstract**

The idea of the present study is based on that some morphological formulas which are used in the Holy Quran (Hafs Recitation) have several grammatical functions according to different morphological uses. These type of words have similarity in the pronunciation, but in contrast different in the interpretation. The morphological formula requires grammatical function such as: subject, object and adverb. Meanwhile the meanings are numerous and seem complex, because the meanings are endless, however the words are limited. This phenomenon reflects the extent of overlap and interdependence between relations when the formulas of the syntax are numerous.

This study shows the importance of the context and the other presumptions to determine the indication or the close meaning of several different meanings the structure has. Because of the use of a single word that out of context has a meaning in the lexicon as a result of derivation, on the other hand has a grammatical functional meaning when is in a context or a text. The study focuses on the formulas of the noun and the verb, so discusses the different uses of the formulas in many situation in the Holy Quran and to differentiate between them in use. In addition, the formulas which the simplicity and the formulation are not clear are mentioned, the formulas which the noun and the verb have similarity are discussed and the formulas which have their own unique and probably have similarity besides are explained. It sounds that the reader may face difficulty with these words in discovering the function or the indication as result of the correct possibilities and meaning. The study adopts the opinions of the linguists, the interpreters and the Grammarians using solid evidences.
